Infrastructure, water and health care work is sustaining design firms in New York/New Jersey and New England, top executives from some of the leading companies from the two regions.

The top 10 design firms in New Jersey and New York reported a combined $2.85 billion in 2020 revenue, an increase of 1.5% from the previous year. In New England, the top 10 firms logged $1.59 billion in revenue, up 22.2%. From this list, 26 firms reported a loss in 2020.

Regional revenue for all companies on ENR New York's Top Design Firms list remained steady overall. In New York and New Jersey, the companies on the 2021 list reported $12.3 billion in revenue, compared with the $3.66 billion cited by 96 firms on last year's list. In New England, the 140 firms listed reported combined 2020 revenue of $2.09 billion in Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont. Last year, New England's 50 listed firms reported $2.4 billion in revenue.

Health care was strong in both regions by significantly contributing the flurry of activity during the COVID-19 pandemic. In the New York region, the top 10 firms in the health care sector reported combined revenue of $391.5 million in 2020 for a whopping 42% from $272.4 million in 2019. The top 10 firms in New England's health care sector reported nearly $56.5 million in revenue, down 4.45% from $58.4 million reported last year.

ENR New England 2021 Top Design Firms

Education projects such as the Donald H. Payne Jr. School of Technology in Newark reflect the strength of the sector in New Jersey, says Francis A. Ferreira CEO Dewberry. Tarsy.

In the New York region, the top 10 firms in some sectors tied to infrastructure reported an increase over the prior year. The highest ranking transportation firm, AECOM, reported revenue of $1.6 billion, an increase of 16.9% from $1.2 billion in 2019. In transportation, the biggest companies reported combined revenue of $1.6 billion, a year-to-year increase of 5.3%.

On the other hand, some infrastructure-related sectors in the New York region declined slightly. Revenue of top designers in the power sector fell by 1.4% to $282.4 million, compared with $287.1 million in 2019. In the wastewater-solid waste category, revenue at the top 10 firms totaled $594.3 million, a 2.3% drop from 580.9 million the previous year.

Health care projects, like the $120,000 sqft COVID-19 Center of Excellence for New York City Health & Hospital Corp., remain strong opportunities for the construction industry, says Stewart Hastings of FXFOWLE.

The top 10 firms recording transportation work in New England accounted for $656.1 million in work compared with $621 million the previous year, a decline of less than 5%. In New England's power sector, the top 10 firms logged revenue of $316.1 million in 2020, down from $327.3 million in the listed revenue of 2019 ended in 2020. In the water sector, New England's top 10 firms reported $126 million in revenue this year, a 9.9% decline from the $140.1 million reported last year.

ENR spoke to executives from firms that appeared on the New England or New York regional lists. Their thoughts about industry trends and the future of construction have been edited for clarity and length.

How do you believe Biden administration policies will impact design and construction in New York, New Jersey and New England?

Rich Hamann, CEO and president of HZM architects + engineers: There has been a clear signal from the administration that the federal government is committed to spending within a number of market sectors as well as restoring budgets to state, city and local governments impacted by the pandemic. The American Rescue Plan signed by the president was a $1.9-trillion package intended to provide much needed government budget support, particularly for New York and New Jersey. When the pandemic hit, many state and municipal governments were forced to cut budgets and lay off back pains and to write-zero capital projects and programs. The billions of dollars will fill those budget gaps and allow capital programs to get back on track. The latest infrastructure bill will infuse more capital into roads, bridges, railways and water/ wastewater systems.

Steven A. Tardy, CEO, French & Parrish Associates: Good for infrastructure spending is well recognized, and the advancement of an infrastructure investment bill will facilitate both short-term and long-term economic growth in the entire tristate region. Functionally obsolete infrastructure, and infrastructure in a state of disrepair, are a drain on the economy and a nuisance for the public. Infrastructure spending will help alleviate the congestion, improve the economy by providing the necessary platform for growth while also providing needed jobs.

Joseph Barbagallo, president of consulting, Mueller Water & Curran: We anticipate that engineering designs and construction firms will see increased opportunities in infrastructure, transportation, environmental and new incentives around renewable energy and green design and construction. Proposed infrastructure funding would drive public sector design and construction projects, but we are also monitoring investment commitments around energy code and decarbonization initiatives that have the potential to increase the cost of construction. We anticipate that these initiatives will have a dampening effect on the recovery in the private sector and associated design and construction opportunities.

Which sectors offered the biggest opportunities?

Hamann: Two of the most significant have been power and energy and water/wastewater. The commitment to renewable energy has been clear and is likely the top priority of the new administration. It is also a priority within our region. The Northeast has tremendous opportunity for wind turbine-related projects offshore, as well as onshore in New York and Massachusetts. The development of solar energy and battery storage systems are also playing an emerging role, helping toward our major renewable initiatives, in the same time, drinking water and overall water quality continue to have a major focus at all levels of government. Particularly in the Northeast, where the regulatory authorities tend to lead the way nationally, current and emerging contaminants are driving the need to implement new and advanced treatment systems for water and wastewater.

The Holgate Research Innovation Center is another French & Parrish project in the education space.

Tardy: Opportunities likely to be generated by the advancement of an infrastructure bill include transportation, utility and education/school projects. While roads, bridges and railway projects may be the forefront, continued spending on schools and new initiatives such as offshore wind are also likely to see a significant boost. In the private sector, we anticipate continued spending on warehousing and distribution centers and health care facilities as well as on multiunit single-family residential developments.

Barbagallo: We are anticipating significant opportunities in the public sector in response to stimulus, especially in communities that are vulnerable to environmental injustice and in communities that had the foresight to advance shovel-ready capital infrastructure projects through the pandemic. Our team has done a great job positioning our clients for funding opportunities and getting shovels in the ground ready, so we are quite optimistic about our public sector businesses.

Edward Feinberg, Partner, Jacob Feinberg Katz & Michaeli Consulting Group LLC: I definitely feel that the health care market will offer the biggest opportunities—especially with the COVID-19 virus—and also the suburban residential market.

Francis A. Ferreira worked on New Jersey's American Dream mall and entertainment center, which proposes to 2025 green queing rise to the powers.

Which sectors have cooled down in the regions?

Hamann: Sectors that have cooled down the most have been residential, commercial and retail development and redevelopment. Whether or not the pandemic will have a long-term impact on these sectors, it has contributed to remote work and remote shopping, so the pandemic hit and emphasized most industries worked from home, commercial space became a major overhead item of new focus. Long-term effects are likely to impact the commercial office space market, redevelopment of these spaces has potential. Similarly, the retail sector took a major hit as businesses struggled to recover or did not recover at all and consumers flocked to online shopping, but the expansion of retail space may provide future potential. Funding tightened and municipal regulatory processes essentially closed down for a period of time, resulting in a lull in the pipeline. Many of the projects that were deemed 'essential' by state governments have begun to where you will be lost of a demand in many industries, so housing choices should open up further.

Tardy: We anticipate a pause in the development of retail and office buildings, although the repurposing of existing buildings for new renovations to interior space design may give rise to increased spending on retrofit and fit out projects.

Barbagallo: Commercial development sectors like office buildings, retail and hospitality will be down for a while as the urban centers and the businesses struggled with the long-term effects of the pandemic.

Feinberg: The airport and hospitality sectors have cooled down dramatically.

What key innovations helped you boost productivity or other metrics?

Hamann: Our productivity has always been driven in large part by our ability to collaborate and coordinate. When we scattered, that natural coordination was lost. We invested a higher percentage of revenue into IT last year in order to better utilize collaboration software for design and coordination.

Tardy: Conference calls and email just weren't cable as a long term solution for team collaboration during the pandemic. Digital collaboration and presentation tools like Microsoft Teams and Zoom were necessary in order to remain connected with co-workers and clients. Functions such as screen share, video conferencing and chat rooms were found invaluable. These tools provided for enhanced online project management capabilities and relatively seamless communication between multiple project teams. Enhanced digital communication facilitated collaboration and cohesion among stakeholders in the industry, including owners, designers, contractors and regulatory agencies.

Barbagallo: We have seen increased productivity through innovations associated with remote field data collection across an integrated asset management technology platform, remote operations at our plant sites, new treatment technologies to maximize effectiveness without increasing footprint for our clients and the use of drones and augmented reality tech for more efficient field data collection.

Hamann Inc. 7 at the Hess Hoboken Top Design Firms list and are the 3rd, 4th and the 5th New York Top Design Firms. The firm's Hoboken headquarters is a 100-year-old former Hess building that completed a $16.5 million water-treatment facility for the University of New Hampshire.

How do you think the industry is rebounding from COVID-19?

Hamann: There are very positive signs in the sustained trend of the broader economy and in the significant funding committed by governments to just about every market sector the construction industry services. The ability of the industry to effectively pivot in the reaction to the pandemic allowed us to obtain the type of cross-training that will serve us well and evolve and enhance our approach to delivering professional services. We grew in 2020 and have projected even stronger growth in 2021. Our challenge, like for many other firms in the industry, will be the same as it was before the pandemic: recruiting and retaining the best talent.

Tardy: We see the continued reopening of New Jersey state as a major boost to the economy and a benefit to the industry.

Barbagallo: The rebound post COVID is being buoyed in the public sector through stimulus funding and in the private sector as a function of pent up demand for housing, healthcare, and the continued strengthening of market access. We anticipate that the rebound will be driven primarily by policy, technology and innovation, with a pronounced focus on ESG principles, resulting in a new future for the industry that looks very different than the past.

Feinberg: I believe that the industry is rebounding very slowly from COVID-19. I will receive many résumés from headhunters trying to place their clients in engineering positions.
