

# cause + origin forensic inspections

## cause + origin

H2M's multi-disciplined staff provides multiple lines of cause and origin (C&O) related work. H2M employs numerous structural, mechanical and electrical engineers that have extensive experience in structural undermining and/or collapse, water intrusion events, storm events, wind damage, mechanical and electrical failures and fire investigation. All of H2M's professional engineers are adept at all types of estimating software (Xactimate, etc.), which eases the adjuster's ability to settle all types of claims.

H2M's reports are concise, well written and will clearly define the cause of the claim related damage.

Our claim handling experience includes:

- Water infiltration through building envelopes
- Structure collapses
- Retaining wall damage
- Tree and Vehicle impacts to structures
- Hail damage
- Ice damming
- Inspection of faulty furnaces and heating systems
- Pool and liner damage
- Wind vs. flood events
