

fire + explosion investigation services

H2M has several expert fire and explosion investigators available to assist the needs of the insurance community, public agencies, and private owners. Through the systematic evaluation of the sites, along with the collection and analysis of data, H2M will strive to find the truth with regards to the circumstances and events that resulted in a fire and explosion. Our Certified Fire and Explosion Investigators:

- Adhere to NFPA 921 and NFPA 1033
- Veterans of the fire investigation and insurance communities

With the backing of our multidiscipline engineering services (electrical, mechanical, and structural), our fire investigators are adept at investigating and solving complex claims. H2M's investigators are committed to the scientific process and are well aware of the need to "get it right" when conducting fire and explosion investigations.
